Exam Name: IBM InfoSphere MDM Server v9.0

Version: Demo

100% Money Back Guarantee

QUESTION NO: 1

InfoSphere MDM Server does not allow you to store the source contract cross reference data under both the CONTRACT and the NATIVEKEY tables at the same time with the default configuration. You are working on a project that would like to enable this feature.

What should you do?

- A. Build a behavior extension to handle it.
- B. Properly configure the applied record in the V_ELEMENT_VAL table to ensure that InfoSphere MDM Server will not perform the cross-field validation.
- C. Properly configure the applied record in the V_GROUP_VAL table to ensure that InfoSphere MDM Server will not perform the cross-field validation.
- D. Properly configure the applied record in the V_ELEMENTATTRIBUTE_VAL table to ensure that InfoSphere MDM Server will not perform the cross-field validation.

Answer: C

QUESTION NO: 2

If InfoSphere MDM Server finds a suspect duplicate party, which three activities would you use the Data Stewardship UI feature to do? (Choose three.)

- A. to split parties apart
- B. to mark or unmark parties as suspect duplicates
- C. to search and inquire for completed tasks and assign to another user
- D. to update metadata for the defined critical data elements
- E. to collapse parties together

Answer: A,B,E

QUESTION NO: 3

Click the Exhibit button.

Referring to the exhibit, the class diagram shows the InfoSphere MDM Server Request and Response framework, with the name of one component missing.

"PassAny Exam. Any Time." -

What is the name of the missing component in the exhibit?

- A. DWLRequestHandler
- B. DWLBaseException
- C. DWLCommonServices
- D. DWLControl

Answer: A

QUESTION NO: 4

The Evergreen application can be extended (or customized) according to client logic. Which two approaches can be used to customize the Evergreen application behavior? (Choose two.)

- A. Deploy new metadata specifications.
- B. Configure a new parser and constructor.
- C. Customize the external rules that callInfoSphere MDM Server transactions.
- D. Customize the external rules called fromInfoSphere MDM Server transactions to customize the transaction behavior.

Answer: C,D

QUESTION NO: 5

The info Sphere MDM Server Request-Response provides a consistent entry point to info Sphere MDM Server and is used to requests and issue responses in any format. When a transaction fails, the responses may vary in their content. However key elements allow the developer to identify the potential cause of the failure.

What are two ways to identify the root cause of the failure (Choose two.)

- A. The response file will contain a specific error code-it identifies the reason for the message. This defined in the CFERRORESSAGETP table.
- B. The response file returned the Request-Response framework will provide distinct messages to and in the resolution of the error
- C. The response file will contain a reference a Component ID. Which will uniquely identify the component or subject matter or the message. This is defined in the COMPONENTTYPE table.
- D. The User interface for example the Data stewardship User interface, will provide a stack foe the transaction that failed.

Answer: A,C

QUESTION NO: 6

Which capability of Rational Software Architect must be enabled before developing extensions or additions?

- A. Java Persistence API Transformation
- B. Enterprise Java Developer
- C. J2EE Developer
- D. Web Service Developer

Answer: C

QUESTION NO: 7

Which three components are part of InfoSphere MDM Server Batch Processor? (Choose three.)

- A. Reader Consumer
- B. Submitter Consumer
- C. Receiver Consumer
- D. Writer Consumer
- E. Parser Consumer

Answer: A,B,D

QUESTION NO: 8

What are three manual steps that must be completed to deploy a data extension or data addition that was developed in the InfoSphere MDM Workbench? (Choose three.)

- A. Execute the generated SQL scripts for modifying the database.
- B. Re-package the various merged files into the CustomerResources.jar file.
- C. Merge the generated XSD files into the those in the CustomerResources project.
- D. Merge the generated properties files into those in the properties.jar file.
- E. Uncomment the Data Addition and Extension sections of the properties files on the server.

Answer: A,C,D

QUESTION NO: 9

A granular composite java proxy, CompositeContractPartyRoleLocationTxnBP.java, is created to process (search, inquiry, persist) contractRoleLocation records in InfoSphere MDM Server Application.

Which ContractInquiryLevel should be chosen in this composite transaction that meets both your functional and performance requirements?

- A. Level 0 - - returns basic contract information, contract admin native keys, and contract alerts
- B. Level 1- - returns level 0 data plus all contract spec values, contract components, contract component values, holdings, and party roles.
- C. Level 2- - returns level 1 data plus all contract party role alerts, contract party role locations, contract party role situations, contract party role identifiers, and contract party role relationships.
- D. Level 3 - - returns level 2 data plus all contract relationships.

Answer: C

QUESTION NO: 10

Click the Exhibit button.

```
<DWL Control>
<requester Name>user</requester name>
<requester Language>100</requester Language>
<page Start index>1</page Start index>
<page End index>10</page End index>
</DWL Control>
<TCRM Person Search BOBJ>
<Date of Birth>1990-01-01</Date of Birth>
<Party Filter>ALL</party Filter>
<TCRM Person Search BOBJ>
```

A default implementation of info Sphere MDM Server has a total of 200 person records in the database with the same Date of Birth value "1990-01-01". The maximum search results returned configuration element /IBM/Party/Search/max Results is set to 100. A user submitted the MWL Control and TCRM Person Search BOBJ business object shown in the exhibit within a valid request XML message search Person service and received a valid response XML message successfully.

How many TCRM Person Search Result BOBJ records in the response message?

- A. 0
- B. 10
- C. 100
- D. 200

Answer: B

QUESTION NO: 11

You have set up an InfoSphere MDM Server development environment using a test WebSphere Application Server, locally installed DB2, and have developed a new data extension. After deploying and testing the data extension you need to add some additional attributes to it. You modify the data extension model and re-generate the code.

Before running the generated database setup scripts to deploy the changed database definitions, which step is required?

- A. Run the generated database rollback scripts.
- B. Run the Configuration and Management component
- C. Run the Development Environment Setup wizard.
- D. Restart the server

Answer: A

QUESTION NO: 12

If the MandatorySearchDone field of the TCRMPartyBObj is set to "Y" and an A2 suspect is found during an addParty, which two actions occur?(Choose two.)

- A. The source party is returned in the response.
- B. The suspect parties are returned in the response.
- C. The source party is not added to the database.
- D. The source party is added to the database.

Answer: B,D
