QUESTION 5

Which two utilities support the "what-if" command evaluation?

A. asmcmd

B. ocrconfig

C. oifcfg

D. crsctl

E. srvctl

Correct Answer: DE

Section: (none)

The What-If Command Evaluation feature is designed to evaluate the impact of a command executed against the cluster prior to its execution. There are two levels of the What-If Command Evaluation:

a view for cluster administrators

a view for database administrators.

The difference between the two ?other than the fact that they are provided by either CRSCTL (for the cluster administrator) or SRVCTL (for the database administrator) ?is their information detail. References: http://www.oracle.com/technetwork/products/clustering/rac-wp-12c-1896129.pdf

QUESTION 6

Which three statements are true about the services created when the DBCA is used to create a RAC database?

A. They can be policy managed for a multitenant database.

B. Singleton services are not permitted for multitenant databases.

C. A server-pool must be created with SRVCTL before creating a policy-managed RAC database that uses that server-pool for a service.

D. Policy-managed services specified for a database allow the creation of a new server pool using DBCA.

E. They can be administrator managed for a multitenant database.

Correct Answer: BCE

Section: (none)

C: Cluster Managed Services are no longer managed through DBCA. Instead, use the Cluster Managed Services page in Oracle Enterprise Manager Cloud Control, if available, or SRVCTL.

E: During installation, if you select a multitenant container database (CDB), and configure pluggable databases (PDBs), then Oracle recommends that you add services to the PDBs after installation. Incorrect Answers:

D: Cluster Managed Services are no longer managed through DBCA. Instead, use the Cluster Managed Services page in Oracle Enterprise Manager Cloud Control, if available, or SRVCTL. References: https://docs.oracle.com/database/121/RIWIN/dbcacrea.htm#RIWIN1320

QUESTION 7

Which two actions can restrict the number of instances used for parallel execution of a SQL statement? (Choose two.)

A. setting the PARALLEL_DEGREE_POLICY to LIMITED

B. setting the PARALLEL_FORGE_LOCAL to TRUE

C. setting the PARALLEL_SERVERS_TARGET value equal to that of PARALLEL_MAX_SERVERS

D. using a database service to limit the number of instances that participate in parallel execution

E. creating a UNIFORM service for a policy-managed RAC database

QUESTION 8

Which three statements are true about ASM Cloud File System (ACFS) auditing?

A. Audit information gathered by each cluster node can be consolidated into the unified ACFS audit trail.

B. acfsutil audit archive must be used to archive audit files that are larger than 10MB.

C. acfsutil audit init must be run by a system administrator.

D. acfsutil audit purge can be run by an audit manager.

E. acfsutil audit read marks audit files to indicate that it is safe to purge them.

Correct Answer: CDE

Section: (none)

C: The acfsutil audit init command must be run by the system administrator before enabling auditing for any of the audit sources on a file system.

D: Only an audit manager can run the acfsutil audit purge command.

E: acfsutil audit read marks the audit trail to indicate to the audit manager that the log archive file for the current node has been reviewed, backed up as necessary, and is safe to purge.

Incorrect Answers:

B: acfsutil audit archive does not address file size.
