Vendor: Microsoft

Exam Code:70-415

Exam Name: Implementing a Desktop Infrastructure

Version: Demo

QUESTION 1

A hardware supplier provides you with four server builds. The server builds are configured as shown in the following table.

Build name	Processor type	Processor feature
Build1	Intel Core i7	Intel Turbo Boost Technology
Build2	Intel Xeon	Intel Flex Memory Access
Build3	Intel Xeon	Second Level Address Translation (SLAT)
Build4	Intel Core i7	Intel Flex Memory Access

You need to recommend which server build must be used to meet the VDI requirements. What should you include in the recommendation?

A. Build1

B. Build2

C. Build3

D. Build4

Correct Answer: C

QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012. Server1 has the Active Directory Certificate Services server role installed and is

configured as an enterprise root certification authority (CA).

You plan to implement Encrypting File System (EFS) on all client computers.

Users use different client computers.

You need to prevent the users from receiving a different EFS certificate on each client computer.

What should you implement?

More than one answer choice may achieve the goal. Select the BEST answer.

A. Credential roaming

B. Roaming user profiles

C. PFX files on an external USB disk

D. Folder Redirection

Correct Answer: A

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains client computers that are configured as shown in the following table.

Configuration name	Number	Architecture	Memory	Disk
Type1	100	x86	2 GB	400 GB
Type2	400	x64	4 GB	800 GB
Type3	1,000	x64	8 GB	1 TB
Type4	100	x64	16 GB	2 TB

You plan to deploy Windows 8 by using custom images. The images will be updated frequently. All of the images will have a 32-bit application named App1 preinstalled.

You need to recommend the number of Windows 8 images that must be created for the planned deployment.

How many images should you recommend?

More than one answer choice may achieve the goal. Select the BEST answer.

A. 1

B. 2

C. 3

D. 4

Correct Answer: B

QUESTION 4

You need to configure a Group Policy object (GPO) that meets the security requirements of the users in the New York office. Which Group Policy settings should you configure?

A. Allow installation of devices that match any of these device setup classes Prevent installation of devices not described by other policy settings

B. All Removable Storage classes: Deny all access Prevent installation of devices not described by other policy settings

C. Allow installation of devices that match any of these device setup classes Prevent installation of devices using drivers that match these device setup classes

D. All Removable Storage classes: Deny all access Prevent installation of devices using drivers that match these device setup classes

Correct Answer: C

QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain contains servers that run Windows Server 2012.

You plan to deploy a Remote Desktop Virtualization Host (RD Virtualization Host) that will contain five virtual desktops. The requirement of each virtual desktop is shown in the following table.

Virtual desktop name	Requirement
VD1	Must support creating snapshots of virtual disks.
VD2	Must support dynamically expanding virtual disks.
VD3	Must support differencing virtual hard disks.
VD4	Must support adding or removing storage when the virtual machine runs.
VD5	Must support at least three virtual disk controllers on each virtual machine.

You need to identify which virtual desktop or virtual desktops require a virtual SCSI controller.

Which virtual desktop or desktops should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

A. VD1

B. VD2

C. VD3

D. VD4

E. VD5

Correct Answer: AD

QUESTION 6

Your network contains an Active Directory domain named contoso.com. The domain contains a server named SRV1 that runs Windows Server 2012. SRV1 has the Windows Server Updates Services (WSUS) server role installed.

You deploy Microsoft System Center 2012 Virtual Machine Manager (VMM).

You plan to use WSUS to manage updates for the virtualization infrastructure.

You need to integrate WSUS and VMM to manage the updates.

What should you configure from the Virtual Machine Manager console?

To answer, select the appropriate object in the answer area.

Hot Area:

Correct Answer:

Administrator - SRV1.contoso.com - Virtual Machine Manager

QUESTION 7

Your network contains an Active Directory domain named contoso.com. The domain contains a Virtual Desktop Infrastructure (VDI) and pooled virtual desktops.

Users start virtual desktop sessions by using Remote Desktop Web Access (RD Web Access).

Some users access virtual desktops by using a Remote Desktop Gateway (RD Gateway).

You need to identify which users are connected currently to the virtual desktops.
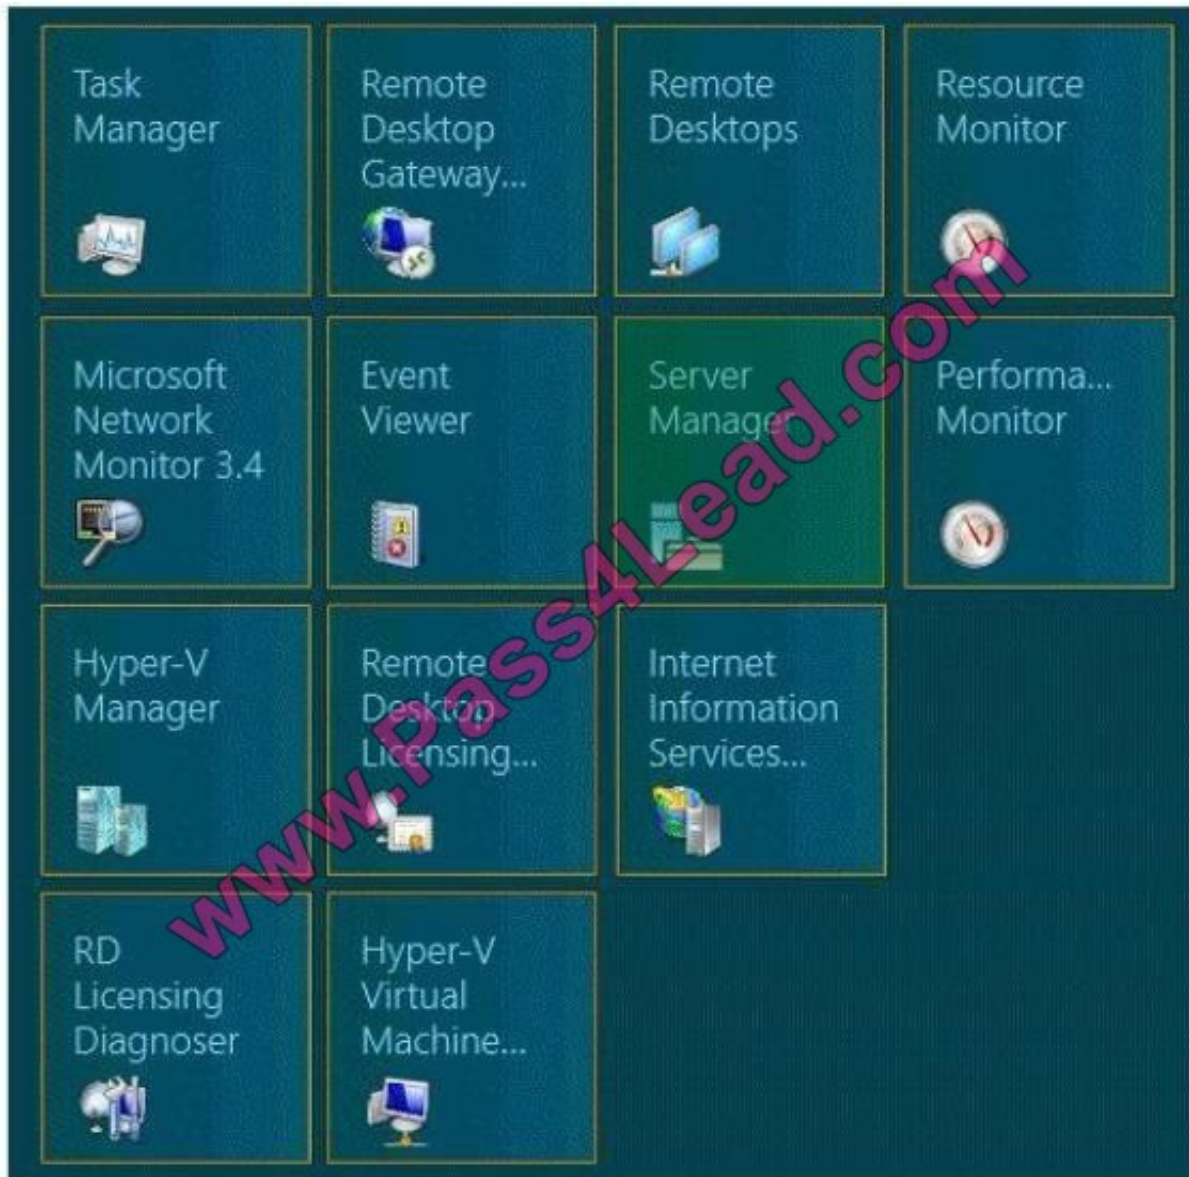

Which tool should you use?

To answer, select the appropriate tool in the answer area.

Hot Area:

Correct Answer:

QUESTION 8

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that have the Windows Deployment Services server role installed.

You use Windows Deployment Services (WDS) to deploy operating systems to client computers. Server1 contains two boot images and two install images of Windows 8.

You copy the images to the appropriate WDS image folders on Server2. You need to ensure that you can use the images on Server2 to install the client computers.

What should you do on Server2?

A. Run wdsutil.exe and specify the /bcdrefreshpolicy parameter.

B. Run bcdboot.exe and specify the /addlast parameter.

C. Run wdsutil.exe and specify the /resetbootprogram parameter.

D. Run bcdboot.exe and specify the fm parameter.

Correct Answer: A

QUESTION 9

You need to recommend a solution for updating App1. The solution must meet the VDI requirements. What should you recommend?

A. Create a new virtual machine from the template file, apply the patch, and create a snapshot of the virtual machine.

B. Create a new virtual machine from the template file, apply the patch, and run sysprep.exe.

C. Mount the virtual machine template on a physical host and configure the template to be bootable. Apply the patch and run sysprep.exe.

D. Mount the virtual machine template on a physical host and configure the template to be bootable. Apply the patch and run dism.exe.

Correct Answer: B

QUESTION 10

You need to implement a solution to deploy patches to all of the client computers. The solution must meet the technical requirements.

What should you do first?

A. Install the Windows Server Update Services Tools feature on SRV-PRI.

B. Install the Configuration Manager console on SRV-WSUS.

C. Install the Configuration Manager console on SRV-DP.

D. Install the Windows Server Update Services Tools feature on SRV-DP.

Correct Answer: A

QUESTION 11

Your company has offices in New York and Sydney.

The network contains an Active Directory domain named contoso.com. An organizational unit (OU) exists for each office.

The New York office contains a Virtual Desktop Infrastructure (VDI). All of the users in the New York office access virtual desktops.

You need to recommend a virtual desktop deployment strategy for the Sydney office users.

The solution must meet the following requirements:

User settings must be retained between sessions.

All of the users must be assigned their own virtual desktop. Group Policies linked to the Sydney office OU must apply to all of the virtual desktops that are used by the Sydney office users.

What should you do?

A. Create a new managed personal virtual desktop collection.

B. Link a Group Policy object (GPO) to the Sydney office OU and specify the User Rights Assignment settings.

C. Create a new managed pooled virtual desktop collection.

D. Link a Group Policy object (GPO) to the Sydney office OU and specify the Restricted Groups settings.

Correct Answer: A

QUESTION 12

You have a server named Server1 that runs Windows Server 2012. Server1 has the Remote Desktop Virtualization Host role service installed.

Collection	Requirement
Collection1	• Updates must be applied automatically. • Data must NOT persist between sessions. • The template virtual machine image must be the same for all users. • New virtual desktops must be created automatically when the users connect.
Collection2	• Updates must be applied manually. • All virtual desktops must be created manually. • User data and applications must persist between sessions. • Users must be able to install applications on their virtual desktop.

You plan to create two virtual desktop collections named Collection1 and Collection2. Each collection will support a separate group of users. The requirements of each collection are shown in the following table.

You need to identify the required configuration for each collection.

What should you identify?

To answer, select the appropriate Collection type and Management type for each collection in the dialog box in the answer area.

Hot Area:

Collection name	Collection type	Management type
Collection1	▼	▼
	Pooled	Managed
	Personal	Unmanaged
Collection2	▼	▼
	Pooled	Managed
	Personal	Unmanaged

Correct Answer:

Collection name	Collection type	Management type
Collection1	▼	▼
	Pooled	Managed
	Personal	**Unmanaged**
Collection2	▼	▼
	Pooled	Managed
	Personal	**Unmanaged**
