Exam Code:70-469

Exam Name:Re for MCSE: Data Platform

Version:Demo

QUESTION 1

You have a SQL Server 2012 database named Database1. Database1 contains a table named OrderDetails.

For a given sales order, you need to retrieve the OrderID, Quantity, and LineTotal columns for all of the items in the OrderDetails table. The solution must ensure that the results can be joined to other tables.

Which code segment should you execute?

- A.

```
CREATE FUNCTION dbo.GetOrderDetails(@OrderID int)
RETURNS TABLE
AS
RETURN
(SELECT OrderID, Quantity, LineTotal
FROM Sales.OrderDetails
WHERE OrderID = @OrderID);
```
- B.

```
CREATE PROC dbo.GetOrderDetails(@OrderID int)
AS
SELECT OrderID, Quantity, LineTotal
FROM Sales.OrderDetails
WHERE OrderID = @OrderID;
```
- C.

```
CREATE FUNCTION dbo.GetOrderDetails(@OrderID int)
RETURNS @retOrderDetails TABLE
(
    OrderID int NOT NULL,
    Quantity int NOT NULL,
    LineTotal decimal NULL
)
AS
BEGIN
    INSERT @retOrderDetails
    SELECT OrderID, Quantity, LineTotal
    FROM Sales.OrderDetails
    ORDER BY @OrderID;
    RETURN;
END;
```
- D.

```
CREATE VIEW dbo.GetOrderDetails
AS
SELECT OrderID, Quantity, LineTotal
FROM Sales.OrderDetails;
```

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: A

QUESTION 2

You have a database hosted on SQL Azure.

You are developing a script to create a view that will be used to update the data in a table.

The following is the relevant portion of the script. (Line numbers are included for reference only.)

```
01 CREATE VIEW View1
02 AS
03 SELECT
04 ...
05 WHERE Column1 = 'City1'
06
```

You need to ensure that the view can update the data in the table, except for the data in Column1. Which code segment should you add at line 06?

- A. WITH CHECK OPTION
- B. WITH VIEW_METADATA
- C. WITH ENCRYPTION
- D. WITH SCHEMABINDING

Correct Answer: A

The question concerning the view that has a clause "WHERE Column1 = 'City1'" is wrong. That's not what the CHECK option is made for. Actually you will be able to update ONLY the rows satisfied by that WHERE clause, that is, only the

rows with the Column1 being 'City1'.

None of the answers are valid from that question. You need a trigger to achieve that.

<http://msdn.microsoft.com/en-us/library/ms187956.aspx>

QUESTION 3

You need to recommend a solution that addresses the backup issue. The solution must minimize the amount of development effort. What should you include in the recommendation?

- A. Indexed views
- B. Filegroups
- C. Table partitioning

D. Indexes

Correct Answer: B

QUESTION 4

You have an index for a table in a SQL Azure database. The database is used for Online Transaction Processing (OLTP).

You discover that the index consumes more physical disk space than necessary.

You need to minimize the amount of disk space that the index consumes.

What should you set from the index options?

A. STATISTICS_NORECOMPUTE = OFF

B. FILLFACTOR = 80

C. FILLFACTOR = 0

D. STATISTICS_NORECOMPUTE = ON

Correct Answer: C

Explanation: <http://msdn.microsoft.com/en-us/library/ms177459.aspx> <http://msdn.microsoft.com/en-us/library/ms188783.aspx>

QUESTION 5

You are designing a database for a university.

The database will contain two tables named Classes and Enrollment that have the following specifications:

Classes will store brochures in the XPS format. The brochures must be structured in folders and must be accessible by using UNC paths.

Enrollment will store information about students and their classes. Performance must be enhanced for queries of the current enrollments.

You need to identify which SQL Server technology meets the specifications of each table.

Which technologies should you identify?

To answer, drag the appropriate technology to the correct table in the answer area.

Select and Place:

Correct Answer:

QUESTION 6

You are the administrator for a SQL Server 2014 instance that stores the data for an online transaction processing sales system.

The company takes full backups every week; differential backups on the days with no full backups; and hourly transaction backups. These backups are stored on a backup server in the company's data center.

Every week, the company places the full backup on a tape and sends it to a third-party backup storage system.

The company is worried that a disaster might occur that could destroy their computer center and cause them to lose orders.

You need to determine the best method for providing the smallest amount of data loss and downtime without leasing or purchasing additional physical locations.

What should you do? More than one answer choice may achieve the goal. Select the BEST answer.

A. Set up SQL Server Always On with a SQL Azure database as a replica.

- B. Set up SQL Server Always On by using a SQL Server on a Windows Azure Virtual Machine.
- C. Put the differential backup on tape and send it to the third-party backup storage system.
- D. Use the Microsoft SQL Server Backup to Microsoft Windows Azure Tool to direct all backups to a different geographical location.

Correct Answer: D

Explanation: SQL Server 2012 was the first version to provide the ability to back up databases to the Cloud, and SQL Server 2014 improves on the process.

Microsoft SQL Server Backup to Windows Azure Tool enables backup to Windows Azure Blob Storage and encrypts and compresses SQL Server backups stored locally or in the cloud. Smart, Secure, Cost-Effective: SQL Server Back Up to Windows Azure - SQL Server Team Blog - Site Home - TechNet Blogs

QUESTION 7

You have an index for a table in a SQL Azure database. The database is used for Online Transaction Processing (OLTP).

You discover that many page splits occur when records are inserted or updated in the table.

You need to minimize the number of page splits.

What should you set from the index options?

- A. FILLFACTOR = 0
- B. STATISTICS_NORECOMPUTE = OFF
- C. STATISTICS_NORECOMPUTE = ON
- D. FILLFACTOR = 80

Correct Answer: D

Explanation: <http://msdn.microsoft.com/en-us/library/ms188783.aspx> <http://msdn.microsoft.com/en-us/library/ms177459.aspx>

QUESTION 8

You need to recommend a solution that reduces the time it takes to import the supplier data. What should you include in the recommendation?

- A. Enable instant file initialization.
- B. Reorganize the indexes.
- C. Disable Resource Governor.
- D. Enable Auto Update Statistics.

Correct Answer: C

QUESTION 9

You have a SQL Server 2012 instance named SQLInstance1. Instance1 contains a database named Database1.

You need to recommend an index defragmentation solution for an index named ContentIndex. ContentIndex must meet the following requirements:

Remain online during the defragmentation.

Update distribution statistics.

Perform defragmentation as quickly as possible.

Which type of index defragmentation solution should you include in the recommendation? More than one answer choice may achieve the goal. Select the BEST answer.

- A. DBCC DBREINDEX
- B. REORGANIZE
- C. REBUILD
- D. DBCC INDEXDEFRAG

Correct Answer: B

QUESTION 10

You need to recommend a solution that meets the concurrency problems. What should you include in the recommendation?

- A. Modify the stored procedures to use the SERIALIZABLE isolation level.
- B. Modify the order in which usp_AcceptCandidate accesses the Applications table and the Candidates table.
- C. Modify the order in which usp_UpdateCandidate accesses the Applications table and the Candidates table.
- D. Modify the stored procedures to use the REPEATABLE READ isolation level.

Correct Answer: C

QUESTION 11

You need to monitor the health of your tables and indexes in order to implement the required index maintenance strategy. What should you do?

- A. Query system DMVs to monitor avg_chain_length and max_chain_length. Create alerts to notify you when these values converge.
- B. Create a SQL Agent alert when the File Table: Avg time per file I/O request value is increasing.
- C. Query system DMVs to monitor total_bucket_count. Create alerts to notify you when this value increases.
- D. Query system DMVs to monitor total_bucket_count. Create alerts to notify you when this value decreases.

Correct Answer: A

QUESTION 12

You need to identify which long running transactions use an index. Which dynamic management view should you use?

- A. sys.dm_exec_query_optimizer_info
- B. sys.dm_exec_connections
- C. sys.dm_exec_query_stats
- D. sys.dm_exec_sessions

Correct Answer: A
