Vendor:Microsoft

Exam Code:70-680

Exam Name:Windows 7 Configuring

Version:Demo

QUESTION 1

You have a computer that runs Windows 7.

You need to copy files to a virtual hard disk (VHD) file.

What should you do first?

- A. Run Dism.exe and specify the /image and /online parameters.
- B. Open Windows Explorer, right-click the VHD file and select Open.
- C. Run Diskpart.exe and then run the Select and Attach commands.
- D. Run Imagex.exe and specify the /mountw and /append parameters.

Correct Answer: C

Diskpart

Microsoft command-line tool Diskpart is used to create and format volumes on the target computer.

Select

Shift the focus to an object.

Attach

Attaches a virtual disk file.

QUESTION 2

A user telephones your help desk. Her Favorites list is corrupt and she is having problems accessing the Web sites she visits regularly. All the computers in your organization are backed up every night with a file and folder backup that uses default settings. A restore point was created on all the company\\'s client computers 24 hours ago because a new device driver was installed. You performed a System Image backup on all the computers in your organization three weeks ago. The user is not computer-literate and you need to fix the problem for her.

What is the most efficient way to do so?

- A. Perform a system restore.
- B. Perform a System Image restore.
- C. Use the Restore Files Wizard to restore the Favorites folder in the user\\'s backed-up profile.
- D. Access the History tab under Favorites on the user\\'s browser. Browse to recently visited sites and add them to Favorites.

Correct Answer: C

QUESTION 3

You plan to deploy Windows 7 images.

You need to ensure that you can deploy images by using the Windows Preinstallation Environment (Windows PE).

What should you add to the Windows PE image?

- A. Imagex.exe
- B. Mighost.exe
- C. Usmtutils.exe
- D. Loadstate.exe

Correct Answer: A

QUESTION 4

A stand-alone computer that runs Windows 7 has only one partition. Two users named User1 and User2 share this computer.

User1 encrypts a file by using Encrypting File System (EFS). User1 attempts to grant User2 access to the file as shown in the exhibit.

You need to ensure that User1 can grant User2 access to the file.

What should you do?

Exhibit: A. Instruct User2 to log on to the computer and take ownership of the file.

B. Instruct User1 to move the file to a shared folder on the computer.

C. Instruct User2 to export the EFS certificate to a certificate file.

D. Instruct User1 to export the EFS certificate to a certificate file.

Correct Answer: C

QUESTION 5

You have a computer that runs Windows 7.

You install Internet Information Services (IIS) to test a web based application. You create a local group named Group1. You need to ensure that only the members of Group1 can access the default Web site.

Which two configuration changes should you perform? (Each correct answer presents part of the solution, Choose two.)

A. Modify the properties of Group1.

B. Assign an SSL certificate to the default Web site.

C. Modify the authentication methods of the default Web site.

D. Modify the NTFS permissions of the %systemroot%\inetpub\wwwroot folder

Correct Answer: CD

Modifying the Default Authentication Method

You can use the Directory Security tab of the Web Site Properties dialog box to change the authentication method. The authentication method determines whether users are identified, and how users must be identified to access your site. The

authentication method you select varies, depending on the kind of site you are creating and the purpose of the site.

Modify the NTFS permissions of the %systemroot%\inetpub\wwwroot folder

See article:

How to set required NTFS permissions and user rights for an IIS 5.0, IIS 5.1, or IIS 6.0 Web server
<http://support.microsoft.com/kb/271071> Trust me ;)

QUESTION 6

You work as the Desktop support technician at Abc.com. The Abc.com network consists of a single Active Directory domain named Abc.com.

The Abc.com management has instructed you to install Microsoft Windows 7 on all the client computers at Abc.com. You need to create a Windows 7 image that includes the Office 2007 Microsoft Installer Package (MSI) package for the installation.

What should you do?

- A. You should consider installing the MSI package by using the update command with the /slipstream switch.
- B. You should consider installing the MSI package by using the Msiexec command with the /package /uninstall switches.
- C. You should consider installing the MSI package by using the Msiexec command with the /package switch.
- D. You should consider installing the MSI package by using the Install command with the /package switch.

Correct Answer: C

QUESTION 7

You have a portable computer named Computer1 that runs Windows 7.

You have a file server named Server1 that runs Windows Server 2008. Server1 contains a shared folder named Share1.

You need to configure Computer1 to meet the following requirements:

Ensure that cached files from Share1 are encrypted.

Ensure that files located in Share1 are available when Server1 is disconnected from the network. What should you do?

A.

On Server1, encrypt the files in Share1. On Computer1, make Share1 available offline.

B.

On Server1, configure BitLocker Drive Encryption. On Computer1, make Share1 available offline.

C.

On Computer1, make Share1 available offline and enable encryption of offline files.

D.

On Computer1, copy the files from Share1 to the Documents library and configure BitLocker Drive Encryption.

Correct Answer: C

Offline Files

The Offline Files feature of Windows 7 allows a client to locally cache files hosted in shared folders so that they are accessible when the computer is unable to connect directly to the network resource. The Offline Files feature is available to

users of the Professional, Enterprise, and Ultimate editions of Windows 7. You can use the Offline Files feature to ensure access when a client computer is out of the office or when a temporary disruption, such as a wide area network (WAN)

link failing between a branch office and a head office, blocks access to specially configured shared folders.

Using Sync Center

You can use Sync Center to synchronize files, manage offline files, and resolve synchronization conflicts manually. Sync Center is located within the Control Panel or by typing Sync Center into the Search Programs and Files text box on the

Start menu. Clicking Manage Offline Files opens the Offline Files. This dialog box is also available using the Offline Files control panel. Using this dialog box, you can disable offline files, view offline files, configure disk usage for offline files, configure encryption for offline files, and configure how often Windows 7 should check for slow network conditions.

QUESTION 8

You administer computers that have Windows 7 and Internet Explorer 8 installed. You want to log on to one of the computers and access a web-based management application that runs on a server by using Internet Explorer.

You need to ensure that any data about your browser session is not saved on the computer.

What should you do?

- A. From Internet Options, modify the security settings for the Internet zone.
- B. Start the Microsoft Network Access Protection service.

- C. From the Safety drop-down menu, configure InPrivate Filtering.
- D. From Internet Options, select Delete browsing history on exit.

Correct Answer: B

QUESTION 9

You have a computer named Computer1 that runs Windows 7. You plan to migrate the user state on Computer1 by using User State Migration Tool (USMT) 4.0.

You need to identify which user documents will be included in the migration.

What should you do?

- A. Run Usmtutils.exe and use the /ec option.
- B. Run Sysprep.exe and use the /audit option.
- C. Run Loadstate.exe and use the /v:12 option.
- D. Run Scanstate.exe and use the /genmigxml option.

Correct Answer: D

ScanState You run ScanState on the source computer during the migration. You must run ScanState.exe on computers running Windows Vista and Windows 7 from an administrative command prompt. When running ScanState on a source computer that has Windows XP installed, you need to run it as a user that is a member of the local administrators group. The following command creates an encrypted store named Mystore on the file share named Migration on the file server named Fileserver that uses the encryption key Mykey: `scanstate \\fileserver\migration\mystore /i:migapp.xml /i:miguser.xml /o /config:config.xml /encrypt /key:"mykey"`

/genmigxml: path to a file This option specifies that the ScanState command should use the document finder to create and export an .xml file that defines how to migrate all of the files on the computer on which the ScanState command is running.

QUESTION 10

You work in an international company which is named Wiikigo. Before entering this company, you have two years of experience in the IT field, as well as experience implementing and administering any Windows client operating system in a

networked environment. You are professional in installing, upgrading and migrating to Windows 7, deploying Windows 7, and configuring Hardware and Applications and son on. You have a computer that runs Windows 7.

You run Runas and specify the /savecred parameter to start an application.

The stored password needs to be deleted.

What action should you perform?

- A. The Windows credentials should be modified from Credential Manager.
- B. The Authorization Manager options should be modified from Authorization Manager.
- C. Del should be run and the /p parameter should be specified.
- D. Runas should be run and the /nopprofile parameter should be specified.

Correct Answer: A

QUESTION 11

A company has client computers that run Windows 7 Enterprise. The company also has a file server running Windows Server 2008 R2 that is configured to use BranchCache. You need to configure the client computers to be BranchCache clients.

Which two choices should you use to achieve this goal? (Each correct answer presents a complete solution. Choose two.)

- A. Device Manager
- B. Local Users and Groups
- C. the User Account Control Settings Control Panel window
- D. the Group Policy management console
- E. the Services management console
- F. the folder Properties window
- G. the netsh command
- H. the icacls command
- I. share permissions

Correct Answer: DG

To enable BranchCache on Windows 7 client computers using Group Policy, you must first create a Group Policy object (GPO) that will carry the BranchCache configuration. After creating the GPO, you configure the setting that enables

BranchCache and choose whether BranchCache will operate in Distributed Cache mode or Hosted Cache mode.

To create a GPO, enable BranchCache, and select the cache mode Click Start, point to Administrative Tools, and click Group Policy Management Console.

Client configuration using netsh

When configuring client computers, you can enable BranchCache and choose between Distributed Cache mode and Hosted Cache mode with a single netsh command.

QUESTION 12

You have a reference computer that runs Windows 7.

You plan to create an image of the computer and then deploy the image to 100 computers.

You need to prepare the reference computer for imaging.

What should you do before you create the image?

- A. Run Package Manager.
- B. Run the System Preparation tool.
- C. Install the User State Migration Tool.
- D. Install Windows Automated Installation Kit.

Correct Answer: B

Sysprep

Sysprep is a tool designed for corporate system administrators, OEMs, and others who need to deploy the Windows XP operating system on multiple computers.

After performing the initial setup steps on a single system, you can run Sysprep to prepare the sample computer for cloning. Sysprep prepares the image for capture by cleaning up various user-specific and computer-specific settings, as well

as log files. The reference installation now is complete and ready to be imaged.
