Exam Code: C2040-840

Exam Name: IBM Lotus Notes Domino 8 Configuring
Domino Web Servers

Version: Demo

QUESTION NO: 1

An LDAP client can specify a search base when searching a directory. A search base performs what function?

- A. It tells the LDAP service what view to search.
- B. It limits the scope of a search by specifying a point in the directory tree at which to begin.
- C. It provides the LDAP service with a username and password for searching a directory securely.
- D. It limits the LDAP search to specific local address books that are encrypted using the current user ID file.

Answer: B

QUESTION NO: 2

While creating Internet Site documents, you do not select a specific server from your environment to host the Web site. What is the result of this action?

- A. All servers in the domain may host this site.
- B. The Internet Site will not be loaded on any server.
- C. All servers with no default Internet Site specified will serve this site.
- D. Any server with the same organizational certifier may serve the Web site.

Answer: B

QUESTION NO: 3

When the LDAP service cannot find information for which an LDAP client is searching, it can return a referral to the client. What Domino service does it utilize to provide this referral?

- A. MAPS
- B. Referrer
- C. Replicator
- D. Directory Assistance

Answer: D

QUESTION NO: 4

You have created substitution rules on your Domino Web server. However, you failed to

include at least one wildcard anywhere in the rule. What is the result of this action?

- A. Domino will send the user to the default home page for the Web server.
- B. The Domino Web server will ignore the request from the browser session.
- C. The user will receive an error code defined by the administrator in this rule.
- D. The HTTP task automatically appends "/" to the pattern when it stores the rule in its internal table.

Answer: D

QUESTION NO: 5

Marshall, the Domino administrator, has enabled multi-server session authentication (MSSO), but it is not functioning properly. Which of the following is necessary for him to complete for SSO to be enabled properly?

- A. Create a Web SSO Configuration document.
- B. Remove the HTTP task from the server notes.ini file.
- C. Remove the full DNS server name in the host name field of the Web Site or Server document.
- D. Choose Disabled in the Web Site document to prevent cookies from being used by the Domino server for authentication.

Answer: A

QUESTION NO: 6

Lizette wants to enable Domino Off-line Services (DOLS) for her Internet users. What field must be configured to allow DOLS to function?

- A. The DOLS field
- B. The DSAPI field
- C. The ndolextn field
- D. The offline services field

Answer: B

QUESTION NO: 7

Certain clients utilizing WebDAV attempt to lock WebDAV items. Where is design locking enabled for WebDAV?

-
- A. The Global Web settings document
 - B. The server configuration document in the Domino Directory
 - C. The Web Site document that is specified for the WebDAV domain
 - D. The Design tab of the Database Properties dialog box for each WebDAV database

Answer: D

QUESTION NO: 8

Web rules are applied to HTTP requests from Web browsers in a particular order. Which of the following best describes the order that they are applied?

- A. Response, supplemental, and directory
- B. Substitution, supplemental, and response
- C. HTTP response header, redirection, and directory
- D. Substitution, redirection, and HTTP response headers

Answer: D

QUESTION NO: 9

Domino allows you to move files from one directory to another on the same Web server.

What type of rule should be created so new links do not need to be created?

- A. Direction Rule
- B. Directory Rule
- C. Redirection Rule
- D. Substitution Rule

Answer: D

QUESTION NO: 10

Margaret has edited the Web Site configuration document to enable users to see the realm "Sales" in the authentication dialog. Which of the following fields were modified?

- A. Description
- B. Directory or file path
- C. Realm name returned to browser
- D. Realm label returned to browser

Answer: D

QUESTION NO: 11

WebDAV allows users to do which of the following?

- A. Configure SSL via a Web browser.
- B. Edit and manage files on remote Web servers.
- C. Edit and manage files on their Notes client.
- D. Set ACLs in Domino databases via the Web browser.

Answer: B

QUESTION NO: 12

Open, inactive sessions can prevent users from accessing the server. What time limit can be set so inactive sessions do not remain open with the Domino server?

- A. CGI timeout
- B. Output timeout
- C. Request timeout
- D. Persistent connection timeout

Answer: D

QUESTION NO: 13

A user sends a search request to Server A, but some of the search results are actually located in a database on Server B. What must be configured for Server A to generate the HTML for the search results page to point to Server B?

- A. The search results URL field in the server document
- B. The search results URL field in the domain document
- C. The generating references to the Web server?field in the server document
- D. The generating references to the Web server?field in the domain document

Answer: C

QUESTION NO: 14

Karen wants to customize the data that is being transmitted to a HTTP browser request

to improve the performance of browser caching. What type of Web rule would she create?

- A. Directory
- B. Redirection
- C. Substitution
- D. HTTP Response Header

Answer: D

QUESTION NO: 15

Kyle wants to specify an alternate location for HTML files to be stored on the Domino server. Which field would he modify to achieve this?

- A. HTML Database
- B. Icon URL Path
- C. HTML Directory
- D. Icon Directory

Answer: C

QUESTION NO: 16

Josie made a change to the Web site's site configuration document which caused WebDav to stop functioning. Which one of the following changes would cause WebDAV to stop working?

- A. A DSAPI filter was enabled.
- B. Session Authentication was enabled.
- C. POP3 was loaded on the same server.
- D. Internet Site documents were created.

Answer: B

QUESTION NO: 17

Which type of Web Rule points incoming URLs to another URL?

- A. Directory
- B. Redirection

-
- C. Substitution
 - D. HTTP Response Header

Answer: B

QUESTION NO: 18

Chartrise has created a Directory Rule to map the location of a Domino database. The rule is not functioning correctly. What is the cause of the failure?

- A. The Domino server task Rules is not loaded.
- B. Directory rules are only used for name lookup and authentication.
- C. Directory Rules are a scheduled event and the rule has not been processed.
- D. Directory rules can only be used to map the location of files that are to be read directly.

Answer: D

QUESTION NO: 19

Brent, the Domino Administrator, wants clients to be able to resume downloads if interrupted. He will be using byte-range serving for clients that support it. What must he verify on document attachments so that byte-range serving will function correctly?

- A. Attachments must be decompressed.
- B. Attachments must be HTTP enabled.
- C. Attachments must have the extension .zip.
- D. Attachments must have the extension .brs.

Answer: A

QUESTION NO: 20

As the Domino administrator, you have been asked to improve client-side performance and security of Domino Web Access sessions. You start by controlling which entries are removed from the browser when the Domino Web Access session ends. Which of the following must be enabled for this enhancement to function?

- A. User Browser Cleanup
- B. Browser Cache Management

-
- C. Domino Forced Management
 - D. Browser Temporary Cleanup

Answer: B

QUESTION NO: 21

Dennis, a Domino administrator, wants to apply Web rules to multiple Web sites. Which type of Web rules document should he create?

- A. Substitution document
- B. Global Web Settings document
- C. HTTP Response header document
- D. Web server redirection document

Answer: B

QUESTION NO: 22

Which one of the following statements regarding the Certificate Authority (CA) is true?

- A. The CA issues only Internet certificates.
- B. Access to the certifier ID must be granted.
- C. The CA issues both Lotus Notes and Internet certificates.
- D. Access to a certifier ID password must be provided to all registration authorities.

Answer: C

QUESTION NO: 23

Libby set up byte range serving for Domino and Web clients. Which one of the following is a characteristic of byte range serving?

- A. Byte range serving must be configured after setup.
- B. Only files attached to documents or forms are supported.
- C. If a download is interrupted, the client must repeat the download from the beginning.
- D. If a download is interrupted, the client restarts the download from the point of interruption.

Answer: D

QUESTION NO: 24

Domino offers the ability to store Web credentials, including the user's name, password, and the list of groups to which the user belongs, in memory after successful Web authentication. Which of the following controls the number of personal credentials cached?

- A. Maximum Cached Users
- B. Stored Credential Vault
- C. Authentication Memory Count
- D. Cached User Expiration Interval

Answer: A

QUESTION NO: 25

Miranda wants to deploy LDAP access to the Domino directory. However, she wants to restrict the fields available to anonymous users. In what document are the fields selected that will be available to anonymous access?

- A. LDAP Site document
- B. Internet Site document
- C. LDAP configuration document
- D. Default server configuration document

Answer: D

QUESTION NO: 26

Jerry, a Web user, has customized his preferences while visiting a Domino Web server. Where are the preferences stored?

- A. On his local machine in a cookie
- B. On the Domino server in a cookie
- C. On the Domino server in a Notes database
- D. On his local machine in a Notes database

Answer: A

QUESTION NO: 27

David wants to view the expired certificates in the Certification Revocation List (CRL).

In which one of the following would David find this information?

- A. In the CRL document in the Domino Directory
- B. In the Domain document in the Domino Directory
- C. In the Server document in the Domino Directory
- D. In the Certifier document in the Domino Directory

Answer: D

QUESTION NO: 28

Chris, a Domino administrator, has created a Web Site authentication realm for the Data\Sales directory with a label of Inventory. What is returned to the Web browser for a user authenticating with a database in the Sales directory?

- A. Sales
- B. Inventory
- C. Data\Sales
- D. Data\Inventory

Answer: B

QUESTION NO: 29

Response header rules have been placed on your Domino Web server. When are these rules applied to URL requests?

- A. After substitution rules
- B. Before redirection rules
- C. Concurrent with global rules
- D. Sequentially behind document redirection

Answer: A

QUESTION NO: 30

The TCP authentication field "Redirect TCP to SSL" is set to "No". What effect does

this setting have?

- A. It allows clients and servers to use SSL or TCP/IP to access the Web site.
- B. It allows clients and servers to use TCP/IP and POP3 to access the Web site.
- C. It requires clients and servers to use the SSL protocol to access the Web site.
- D. It requires clients and servers to utilize LDAP to retrieve authentication information.

Answer: A

QUESTION NO: 31

To enable SSL for a hosted organization, you must use the server IP address in which of the following fields?

- A. IP Address
- B. Hosted Address
- C. HTTP mapped IP address
- D. Host names or addresses mapped to this site

Answer: D

QUESTION NO: 32

Libby, a Web user, is accessing a Domino Web server and looking at a HTML page.

However, certain images are not showing correctly on the page. Which of the following could be a cause of the image not showing?

- A. There is an ACL set to -No Access- for that image.
- B. She does not have upload ability on the Domino Web server.
- C. A File Protection document is restricting access to that image.
- D. The image has a reader field assigned and she is not in the field.

Answer: C

QUESTION NO: 33

Andy, a system administrator, is implementing a Web cluster of Domino servers for load balancing. Which of the following will provide native Web failover in Domino?

- A. AWL
- B. ICM

-
- C. IIS
 - D. WLB

Answer: B

QUESTION NO: 34

You have successfully created a domcfg.nsf database for your Domino Web server. You also successfully created a custom error message when a user's Internet password has expired. However, users are not receiving the prompt when accessing the corporate portal HTML page located in the Domino\HTML directory. Which of the following best describes the reason for this scenario?

- A. Custom error messages do not apply to non-database files.
- B. Users are not allowed to edit their password at any time via HTTP.
- C. The usage of the domcfg.nsf also requires that SSL be enabled for all custom errors to be displayed.
- D. DIIOP handles the processing of custom error messages and you have not loaded this task on the server.

Answer: A

QUESTION NO: 35

As the Domino administrator, your Web server will not allow anonymous connections. However, basic name and password authentication is enabled. Your Domino Web Access users are notifying you that they are receiving multiple prompts to authenticate. Correctly configuring which of the following document types would remove this multiple prompt for the users?

- A. Web
- B. Realm
- C. Redirection
- D. Substitution

Answer: B

QUESTION NO: 36

Which of the following must be configured to successfully utilize multi-server session authentication?

- A. LDAP
- B. LTPA token
- C. JavaScript
- D. CGI scripting

Answer: B

Explanation:

QUESTION NO: 37

Carl, a user, performs a domain search against a Domino server from his browser. One of the returned databases resides on a server outside of the search server. What must be configured on the Domino server to present Carl with a correct link to the other server?

- A. The DIIOP field must be enabled.
- B. The second Domino server must have SMTP enabled.
- C. The generating References to this Server field must be configured.
- D. The allow Remote Searches to Include this Server field must be set to ues.

Answer: C

QUESTION NO: 38

You are configuring Domino Domain Monitoring (DDM) to monitor Web agents. What is the default polling time that DDM will probe the Web agents?

- A. 30 seconds
- B. 1 minute
- C. 5 minutes
- D. 600 seconds

Answer: B

QUESTION NO: 39

Monique, the system administrator, wants to allow browser clients accessing a Dominohosted

Web site to run a Java applet that uses CORBA. Which one of the following

must Monique do to accomplish this?

- A. Set the database property "Web access: Enable Java Applets."
- B. Start the Domino ORB and enable the IIOp port in the Server document.
- C. Enable the SSL port in the Server document so that the IIOp port can communicate securely with the Java applet.
- D. Nothing. Domino natively enables the execution of Java applets as long as they were compiled with the lotus.notes.noi package.

Answer: B

QUESTION NO: 40

Which of the following supports all phases of request handling, including mapping and

transforming incoming URLs?

- A. DOLS
- B. DSAPI
- C. Adminp
- D. HTTP response headers

Answer: B

QUESTION NO: 41

Which one of the following describes the function of a Domino Internet Cluster

Manager (ICM) server?

- A. It is an input control manager for authentication.
- B. It maintains a list of Domino servers in clusters.
- C. It directs Internet Information Server (IIS) requests to the HTTP server.
- D. It redirects HTTP traffic to the most available server in a Domino cluster.

Answer: D

QUESTION NO: 42

Miriam, the Domino administrator, has created a Web cluster. However, she wishes the

ICM to not allow access without authentication. Which of the following is true in

relation to securing the ICM from anonymous access?

- A. The ICM can be configured to accept only SSL requests.
- B. The ICM must have the port for anonymous access disabled.
- C. The ICM must be configured to accept fewer name variations with higher security.
- D. The ICM may only receive and pass anonymous requests and the cluster servers must handle security.

Answer: D

QUESTION NO: 43

What type of document controls access to non-database files that users can access via Web browsers?

- A. File protection documents
- B. HTML protection documents
- C. HTTP protection documents
- D. Domino image protection documents

Answer: A

QUESTION NO: 44

Directory Assistance allows you to configure connections to multiple LDAP sources for authentication. However, you do not have the host names of the possible LDAP sources in your environment. Which of the following Domino tools offer assistance in this configuration?

- A. The Suggest button in Directory Assistance
- B. The LDAP Source view in the Domino Directory
- C. The LDAP Wizard in the Domino Administrator client
- D. The Alternate Hosts button in the Domino Directory

Answer: A

QUESTION NO: 45

Todd, a Domino administrator, has decided to utilize a front-end HTTP server outside of Domino. After successfully copying the required files from Domino to the front-end

server, Domino still will not process the HTTP requests. What step did Todd fail to complete?

- A. HTTPEnableAlternateServer=1 needs to be added to the notes.ini
- B. HTTPEnableConnectorHeaders=1 needs to be added to the notes.ini
- C. Load Alternate HTTP needs to be issued at the Domino server console
- D. Load Alternate Web Server needs to be issued at the Domino server console

Answer: B

QUESTION NO: 46

Arlene, the Domino administrator, has issued the following command on the Domino Web server after making some changes: Tell HTTP Refresh.

However, the configuration changes made were not performed by the server. Which of the following provides the best explanation?

- A. There is no such command for HTTP in Domino.
- B. Changes were made to Web Configuration documents.
- C. She is not listed in the field "Administer this server from the web."
- D. She has not been assigned the WebAdministrator role in the Domino Directory.

Answer: B

QUESTION NO: 47

As the Domino administrator, you choose to allow application agents invoked by the WebQueryOpen and WebQuerySave form events to run asynchronously. Which of the following values have you configured?

- A. Web Agent Timeout to enabled
- B. Web Agent Asynchronous to enabled
- C. Run Web Agents Concurrently to enabled
- D. Run Web Agents Concurrently to disabled

Answer: C

QUESTION NO: 48

Alexander has installed and configured the appropriate Web server plug-ins on a frontend

server. What two HTTP servers are supported as front-end Web servers that pass

HTTP requests to Domino servers?

- A. IHS and IIS
- B. Apache and IIS
- C. Apache and IHS
- D. IIS and Cold Fusion

Answer: A

QUESTION NO: 49

The TCP authentication field for anonymous is set to "No". What effect does this setting have?

- A. No Web users will obtain access.
- B. All anonymous users are prohibited accessb
- C. All connections to the Domino server must be made via SSL.
- D. All connections to the Domino server must always be anonymous.

Answer: B

QUESTION NO: 50

If you cross-certify a CA, you trust the CA to issue certificates to users and servers based on which part of a name tree?

- A. Lower
- B. Higher
- C. Standard
- D. Compliant

Answer: A

QUESTION NO: 51

Libby, the Domino administrator, needs to immediately revoke an Internet certificate due to a compromised key. What database will she open to revoke the certificate?

- A. The ICL database for the certifier that issued the certificate
- B. The CRL database for the certifier that issued the certificate

-
- C. The CERT database for the certifier that issued the certificate
 - D. The Domcfg database for the certifier that issued the certificate

Answer: A

QUESTION NO: 52

Fred, the Domino administrator, wants to register users on the Domino server through the Web Administrator database. Which server process must be configured and running for this task?

- A. CA
- B. SSL
- C. RegMan
- D. WebAdmin

Answer: A

QUESTION NO: 53

Barbara wants to migrate her company's Notes certifier to the Certificate Authority process. She has chosen to encrypt the certifier ID with the server ID. What Domino server console command must be issued next?

- A. load unlock ca <idfile>
- B. load ca <password> unlock
- C. tell ca activate <password>
- D. tell ca unlock <idfile><password>

Answer: C

QUESTION NO: 54

A database is being enabled to be accessible through WebDAV. Which of the following is the minimum level of Internet access required?

- A. Reader or Author
- B. Designer or Manager
- C. Editor with Delete capabilities
- D. Anonymous with Create Public Documents

Answer: B

QUESTION NO: 55

Andrea, the Domino administrator, is attempting to provide SSL authentication for each Internet Site document. Which of the following is required to accomplish this?

- A. A single key ring file for the Web server
- B. A server key ring file for each site document
- C. Multiple HTTP instances on the Domino server
- D. Multiple key ring files for each site document

Answer: B

QUESTION NO: 56

Your Domino developers have implemented a custom DSAPI filter for authentication.

Which of the following will not be available in this scenario?

- A. SSL
- B. IMAP or POP3
- C. Internet password lockout
- D. Utilizing a common name for authentication

Answer: C

QUESTION NO: 57

Internet password lockout has been enabled correctly for the domain that Julian manages. Samantha has been locked out from Web access due to too many invalid login attempts. In which of the following ways does Julian allow Samantha to log in again?

- A. Delete the record for Samantha in the Lockout application.
- B. Change Samantha's Internet password and have her log in again.
- C. Have Samantha clear the cookies from her browser and log in again to the Web server.
- D. Clear the Internet password history from Samantha's person document in the Domino Directory.
