QUESTION 1

If you need to install a CA Process Automation agent on the UNIX platform, which factor should you consider?

- A. The domain_url field must contain /itpam/.
- B. The agent installer can only be run in interactive mode.
- C. The agent installer will install Java as part of the agent install.
- D. The domain orchestrator needs to be up and running during the install.

Correct Answer: D

QUESTION 2

You use the Monitor Event operator to:

- A. Configure a process to wait for an SNMP trap event.
- B. Publish an event to an orchestrator before continuing down a path of execution.
- C. Configure a process to wait for one or more events published to an orchestrator before continuing down a path of execution.
- D. Configure a process to wait for one or more events published to an external application before continuing down a path of execution.

Correct Answer: C

QUESTION 3

During which process development phase do you typically create a runbook?

- A. Requirements Analysis
- B. Testing and Deployment
- C. Design and Implementation
- D. Production and Maintenance

Correct Answer: A

QUESTION 4

Which CA Process Automation tab enables you to monitor selected tasks and system elements managed by CA Process Automation?

- A. Operations
- B. Designer
- C. Reports
- D. Library

Correct Answer: A

QUESTION 5

When you are storing multiple versions of an object on an orchestrator, which factors do you need to consider? (Choose two)

- A. Any version can be edited and made current.
- B. Only the last version of an object checked in can be edited.
- C. Creating a baseline version enables you to check out and edit that baselined version.
- D. When the orchestrator starts running the current version of an object, it makes a copy of that object.

Correct Answer: AD

QUESTION 6

The CA Process Automation UI enables you to perform operations such as configuring domains, environments, orchestrators, agents, touchpoints, proxy touchpoints, and host groups. You can perform all these operations from the:

- A. Configuration tab
- B. Operations tab
- C. Designer tab
- D. Library tab

Correct Answer: A

QUESTION 7

Which default CA Process Automation groups have full access to the Designer tab? (Choose two)

- A. PAMUsers
- B. Designers
- C. PAMAdmins
- D. Production Users

Correct Answer: BC

QUESTION 8

Sue White is responsible for approving notebook upgrades. Sue is notified by email that she needs to approve an upgrade request. When Sue logs into CA Process Automation and right clicks the task, which menu options are available? (Choose two)

- A. Take
- B. Reply
- C. Escalate
- D. Approve

Correct Answer: AB

QUESTION 9

You have installed a CA Process Automation agent on a host. Now you want to associate the current environment with the agent host. To do this, you need to configure:

- A. A module.
- B. A touch point.
- C. The domain orchestrator.
- D. CA Embedded Entitlements Manager (CA EEM).

Correct Answer: B

QUESTION 10

Avoid using named datasets to store:

- A. Credentials for use as login information for a system management tool.
- B. Configuration information that will be used in several different processes.
- C. Information for one-time use, such as Simple Object Access Protocol (SOAP) session IDs.
- D. Error messages that will be printed out and used by only a small subset of processes in the library.

Correct Answer: C

QUESTION 11

You recently assigned Indira Chopra to the Environment Configuration Administrator role. With the associated rights, Indira will be able to override various inherited settings. However, Indira will be unable to overwrite settings at the:

- A. Agent level.
- B. Domain level.
- C. Orchestrator level.
- D. Environment level.

Correct Answer: B

QUESTION 12

When you implement schedules in CA Process Automation, which factor should you consider?

- A. Schedule objects need to be activated before use.
- B. Schedule objects need to be added to a calendar object.
- C. If tasks need to be scheduled on multiple touchpoints, multiple schedules need to be created.
- D. The identity of the user who is running the schedule is verified by a mandatory touchpoint security feature.

Correct Answer: A
