

Exam : **LOT-840**

Title : IBM Lotus Notes Domino 8
Configuring Domino Web
Servers

Version : Demo

1. An LDAP client can specify a search base when searching a directory. A search base performs what function?

- A. It tells the LDAP service what view to search.
- B. It limits the scope of a search by specifying a point in the directory tree at which to begin.
- C. It provides the LDAP service with a username and password for searching a directory securely.
- D. It limits the LDAP search to specific local address books that are encrypted using the current user ID file.

Answer: B

2. You have created substitution rules on your Domino Web server. However, you failed to include at least one wildcard anywhere in the rule. What is the result of this action?

- A. Domino will send the user to the default home page for the Web server.
- B. The Domino Web server will ignore the request from the browser session.
- C. The user will receive an error code defined by the administrator in this rule.
- D. The HTTP task automatically appends "/" to the pattern when it stores the rule in its internal table.

Answer: D

3. Open, inactive sessions can prevent users from accessing the server. What time limit can be set so inactive sessions do not remain open with the Domino server?

- A. CGI timeout
- B. Output timeout
- C. Request timeout
- D. Persistent connection timeout

Answer: D

4. When the LDAP service cannot find information for which an LDAP client is searching, it can return a referral to the client. What Domino service does it utilize to provide this referral?

- A. MAPS
- B. Referrer
- C. Replicator
- D. Directory Assistance

Answer: D

5. Domino allows you to move files from one directory to another on the same Web server. What type of rule should be created so new links do not need to be created?

- A. Direction Rule
- B. Directory Rule
- C. Redirection Rule
- D. Substitution Rule

Answer: D

6. Web rules are applied to HTTP requests from Web browsers in a particular order. Which of the following best describes the order that they are applied?

- A. Response, supplemental, and directory

- B. Substitution, supplemental, and response
- C. HTTP response header, redirection, and directory
- D. Substitution, redirection, and HTTP response headers

Answer: D

7. Marshall, the Domino administrator, has enabled multi-server session authentication (MSSO), but it is not functioning properly. Which of the following is necessary for him to complete for SSO to be enabled properly?

- A. Create a Web SSO Configuration document.
- B. Remove the HTTP task from the server notes.ini file.
- C. Remove the full DNS server name in the host name field of the Web Site or Server document.
- D. Choose Disabled in the Web Site document to prevent cookies from being used by the Domino server for authentication.

Answer: A

8. Which type of Web Rule points incoming URLs to another URL?

- A. Directory
- B. Redirection
- C. Substitution
- D. HTTP Response Header

Answer: B

9. Margaret has edited the Web Site configuration document to enable users to see the realm "Sales" in the authentication dialog. Which of the following fields were modified?

- A. Description
- B. Directory or file path
- C. Realm name returned to browser
- D. Realm label returned to browser

Answer: D

10. WebDAV allows users to do which of the following?

- A. Configure SSL via a Web browser.
- B. Edit and manage files on remote Web servers.
- C. Edit and manage files on their Notes client.
- D. Set ACLs in Domino databases via the Web browser.

Answer: B

11. A user sends a search request to Server A, but some of the search results are actually located in a database on Server B. What must be configured for Server A to generate the HTML for the search results page to point to Server B?

- A. The search results URL?field in the server documentThe ?earch results URL?field in the server document
- B. The earch results URL?field in the domain documentThe ?earch results URL?field in the domain document

- C. The generating references to the Web server?field in the server documentThe ?enerating references to the Web server?field in the server document
- D. The generating references to the Web server?field in the domain documentThe ?enerating references to the Web server?field in the domain document

Answer: C

12.Certain clients utilizing WebDAV attempt to lock WebDAV items. Where is esign locking?enabled for WebDAV?Certain clients utilizing WebDAV attempt to lock WebDAV items. Where is ?esign locking?enabled for WebDAV?

- A. The Global Web settings document
- B. The server configuration document in the Domino Directory
- C. The Web Site document that is specified for the WebDAV domain
- D. The Design tab of the Database Properties dialog box for each WebDAV database

Answer: D

13.Karen wants to customize the data that is being transmitted to a HTTP browser request to improve the performance of browser caching. What type of Web rule would she create?

- A. Directory
- B. Redirection
- C. Substitution
- D. HTTP Response Header

Answer: D

14.Chartrise has created a Directory Rule to map the location of a Domino database. The rule is not functioning correctly. What is the cause of the failure?

- A. The Domino server task Rules is not loaded.
- B. Directory rules are only used for name lookup and authentication.
- C. Directory Rules are a scheduled event and the rule has not been processed.
- D. Directory rules can only be used to map the location of files that are to be read directly.

Answer: D

15.Brent, the Domino Administrator, wants clients to be able to resume downloads if interrupted. He will be using byte-range serving for clients that support it. What must he verify on document attachments so that byte-range serving will function correctly?

- A. Attachments must be decompressed.
- B. Attachments must be HTTP enabled.
- C. Attachments must have the extension .zip.
- D. Attachments must have the extension .brs.

Answer: A

16.While creating Internet Site documents, you do not select a specific server from your environment to host the Web site. What is the result of this action?

- A. All servers in the domain may host this site.
- B. The Internet Site will not be loaded on any server.

- C. All servers with no default Internet Site specified will serve this site.
- D. Any server with the same organizational certifier may serve the Web site.

Answer: B

17. Josie made a change to the Web site's site configuration document which caused WebDav to stop functioning. Which one of the following changes would cause WebDAV to stop working?

- A. A DSAPI filter was enabled.
- B. Session Authentication was enabled.
- C. POP3 was loaded on the same server.
- D. Internet Site documents were created.

Answer: B
