A. XMLPorts do not handle XML documents that find and delete data in the database.

B. XMLPorts can be run from the Object Designer.

C. XMLPorts will produce paper output.

D. XMLPorts are only valid for UTF16 character encoding.

Correct Answer: A

QUESTION 10

Which two methods can be used to designate fields to be totaled in a Microsoft Dynamics NAV report?

A. Set the GroupTotalFields property or use the CurrReport.CREATETOTALS command.

B. Set the TotalFields property or set the GroupTotalFields property.

C. Set the TotalFields property or use the CurrReport.CREATETOTALS command.

D. Set the GroupTotalFields property or use the CurrReport.CREATEGROUPS command.

Correct Answer: C

QUESTION 11

Which of the following is an invalid identifier in the C/AL language?

A. Start

B. Maximum Value

C. Begin

D. MaximumValue

Correct Answer: C

QUESTION 12

You are designing a report that is going to be run while other users are inserting records into the same transaction tables. Using the SQL Server Option for Microsoft Dynamics NAV, which is not version-based, what do you need to do to the report to make sure that the data reported will be a consistent snapshot of the data in those transaction tables?

A. There is nothing you can do. The user will just have to tell all the other users not to make any entries while he or she is printing this report.

B. You will need to set the TransactionType property of the report to "Snapshot." This way, users who attempt to make entries will be locked out while the report is printing.

C. You do not need to do anything. Because SQL Server is not version-based, there are no conflicting versions, and all reports print a consistent snapshot of the data.

D. You will need to set the TransactionType property of the report to "Browse." This way, other users\\' entries will not be taken into account while the report is printing.

Correct Answer: B
